

CTRL Systems Announces Authorized Distributorship Agreement with AvionTEq at NBAA-BACE 2026

FOR IMMEDIATE RELEASE

WESTMINSTER, MD; VAN NUYS, CA — October 20, 2026 — CTRL Systems, Inc., a developer of acoustic ultrasound technology, today announced that it has signed an agreement with AvionTEq, a global provider of aviation test equipment and support solutions, naming AvionTEq an authorized distributor of CTRL Systems products.

The announcement coincides with the 2026 NBAA Business Aviation Convention & Exhibition (NBAA-BACE), taking place October 20–22 in Las Vegas, Nevada. AvionTEq is exhibiting at Booth #2625.

The agreement adds CTRL Systems' acoustic ultrasound solutions to AvionTEq's aviation maintenance and troubleshooting portfolio, including the UL101 Aviation Troubleshooter and a range of acoustic imaging cameras.

The UL101 Aviation Troubleshooter (P/N B00033), identified in Boeing tooling references as SPL-1473, helps aircraft maintenance technicians locate ultrasonic sound associated with leaks in applications such as pitot-static, cabin pressurization, bleed air, and oxygen systems. By helping technicians pinpoint leak sources, the UL101 supports efficient troubleshooting within applicable aircraft maintenance procedures.

Complementing the UL101, CTRL's portfolio of acoustic cameras visualizes ultrasonic sound in real time to help technicians locate leak sources. These cameras meet or exceed the technical requirements referenced by Boeing tool designation COM-18702 (Digital Camera – Acoustic) and are offered as functional equivalents under operator tool-equivalency programs, subject to the operator's applicable documentation and quality approval.

Together, the UL101 handheld sensor and an acoustic camera provide a full ultrasonic troubleshooting solution, combining visual scanning to locate suspect areas with focused listening and precise fault isolation. This complementary approach helps maintenance teams move from an initial survey to detailed investigation within applicable aircraft maintenance procedures.

"Aircraft maintenance teams need practical tools that help them pinpoint problems and make better use of troubleshooting time. Our partnership with AvionTEq brings the UL101 handheld sensor and our portfolio of acoustic cameras to a broader aviation audience through an established test equipment provider. We look forward to working together to help more technicians put acoustic ultrasound to work in their maintenance operations."

— Jeremy Watts, Vice President, Technical Sales & Business Development, CTRL Systems

"By adding CTRL Systems to our portfolio, we sharpen our customers' access to innovative tools that increase troubleshooting efficiency and decrease aircraft downtime. We are excited to bring CTRL Systems' solutions to a broader aviation customer base worldwide."

— Fred Bostani, CEO, AvionTEq

NBAA-BACE attendees are invited to visit AvionTEq at Booth #2625 to meet the team and learn more about its aviation test equipment and support solutions. AvionTEq will also conduct a UTS100 ULB Tester raffle during the event. Visitors can stop by the booth for entry details.

About CTRL Systems

CTRL Systems, Inc. develops acoustic ultrasound technologies for leak detection, troubleshooting, condition monitoring, and maintenance applications across aviation and other industries. For more information, visit <https://ctrl.aero>.

About AvionTEq

AvionTEq is a global provider of aviation and avionics test equipment based at Van Nuys Airport in California. The company supports airlines, MROs, aircraft manufacturers, military and government organizations, and business aviation operators worldwide with new and refurbished equipment sales, rentals, trade-ins, repair and calibration support, and technical support services. For more information, visit <https://www.avionteq.com>.
